RECOMMENDATION

Before you switch, ask Sample Power to match a cheaper plan. For the usage on this bill, **OVO The Free 4 Plan** would have cost **about $128.00** less than your current plan. That figure is an estimate, because a bill shows how much power was used in each time window but not the exact hours. If Sample Power will not match it, switch.

What its price relies on is printed under the comparison. Check those conditions suit you before you switch.

Best move: Ask Sample Power to match OVO The Free 4 Plan, or switch to it: it would have cost about $128.00 less for this bill.

*** Estimated** Your bill shows how much you used in the network's time windows, but not the exact hours, so plans with time-of-day rates are priced assuming even use within each window. If your usage moved into OVO's cheapest hours, it could cost as little as about $180.23.

‡ Plan conditions OVO: monthly electronic billing and bill smoothed in advance direct debit are both required. This offer applies to residential customers with a communicating smart meter on an applicable network tariff. GloBird: this plan is available to residential customers with an eligible electricity smart meter. Other conditions apply - call 133456 to check if you are eligible. Tango: monthly e-billing and direct debit required.
